IMO Core

Make the most of valuable EHR data

EHR promise vs. practice

As the healthcare industry evolves, clinicians face significant barriers to delivering better care. Documentation can be overwhelming and often distracts from important face time with patients. Despite their potential, EHRs are primarily transactional workflow tools, not robust clinical documentation systems. And the potential inefficiencies of EHRs means precious time can be wasted on data inconsistencies and manual workarounds.

The EHR has great promise as a platform that could synthesize individual and collective patient data to uncover insights and improve patient care. But in reality, inaccessible data often impedes clinical decision making which is bad for patients, clinicians, and the healthcare systems they practice in.

The IMO alternative

IMO Core is a clinical interface terminology (CIT) solution that brings together a suite of tools to enhance problem list management in the EHR. It improves workflows and ensures accurate documentation so clinicians can focus on care, not coding and reimbursements.

IMO Core helps you:

1

Deliver better, more intentional care

- Dictionary is curated by clinical SMEs
- Provides a simple, organized view of the patient problem list
- Improves quality reporting, population health analyses, and clinical decision support

2

Document more credibly

- Aligns clinical language with rigid coding systems
- Continually updated to be compliant with health system and regulatory requirements
- Accurately identifies when advanced imaging is appropriate

3

Operate more efficiently

- Organizes problems into intuitive disease categories
- Highlights duplicate and outdated data from patient problem list
- Streamlines AUC CDSM verification process
- Automates content import workflow to save time

IMO Core brings together a suite of tools in one comprehensive solution.
