

IMO Core Periop

Strengthen the surgical dictionary to schedule with greater detail, improve efficiency, and maximize reimbursement.

As a revenue-generating hub, operating rooms are constantly looking to improve efficiency and mitigate unnecessary costs – all while ensuring quality patient care.

However, over time, discrepancies can arise while manually maintaining procedural terminology and codes, leading to systemic problems across perioperative workflows. These inconsistencies impact the ability to effectively optimize the block schedule, prepare the OR appropriately, and accurately bill for maximum reimbursement.

Ultimately, without a well-maintained surgical dictionary comprised of standardized terms and accurate codes, workflows become unwieldy and inefficiencies impact the bottom line.

The IMO Core Periop difference

IMO Core Periop seamlessly maintains procedure terms, along with CPT and HCPCS code mappings used in the EHR. From ordering and scheduling cases to documenting and billing for services, IMO Core Periop ensures clinicians, perioperative staff, system administrators, and billing analysts are working with detailed, accurate surgical procedure data.

With IMO Core Periop:

1

Trust comprehensive and current surgical terminology

- Decreases duplicate terms and standardizes procedure names mapped to accurate codes
- Manages updates to important CPT® and HCPCS releases
- Includes 2,900 AORN terms comprising perioperative best practices

2

Streamline workflows and improve efficiency

- Integrates search support with aliases to increase usefulness of the EHR
- Simplifies content upkeep using mapping tools that provide access to accurate terms and codes
- Provides detailed terms to support precise case durations for enhanced OR utilization

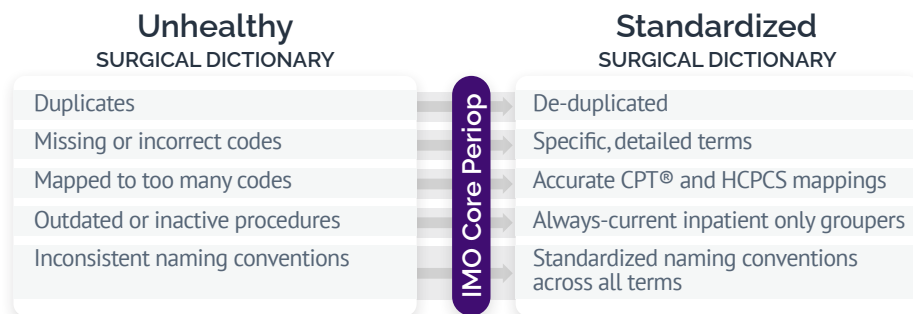

3

Capture better data and maximize financial return

- Flags inpatient only procedures during scheduling
- Includes all applicable codes for each procedure to support pre-authorizations
- Improves alignment to preference cards to optimize OR set-up, procurement, and supply chain management

Improve a critical tool for OR productivity

IMO Core Periop cleans and standardizes the existing terms and codes in your procedure scheduling file. Once normalized, IMO Core Periop web applications serve as the go-to mechanism for adding new terms and preserving data over time.

Developed in partnership with the Association of periOperative Nurses Association, IMO Core Periop includes the AORN Syntegrity® Procedure List, an evidence-based collection of procedure terms to support scheduling, quality of care, and clinical decision-making.

How IMO Core Periop helps you:

Clinicians

- Improves search and selection when creating cases and ordering surgeries in the EHR
- Simplifies how care objectives are digitally represented

Medical informatics, analytics, IT

- Reduces manual content and data governance
- Standardizes content, maintains codes, and minimizes effort when integrating into the EHR

Perioperative services

- Supports more precise case durations for better scheduling and greater OR utilization
- Provides optimized terms for preference card organization and maintenance
- Delivers important details that guide proper OR set-up and supply selection

Finance and revenue integrity

- Delivers complete procedure names and codes needed for pre-authorization submissions
- Includes up-to-date inpatient only data to prevent total-loss denials
- Supports thorough documentation for claims to achieve maximum reimbursement

IMO Health

IMO Health is a clinical data intelligence business at the heart of a digital revolution in healthcare. Combining rich, highly nuanced medical terminology, extensive domain knowledge, and artificial intelligence (AI), we expertly structure and operationalize clinical data to generate sharper insights and inform more intelligent decision-making.

Deeply embedded in the provider world, we developed a comprehensive intelligence layer that captures and encodes patient encounters with unmatched completeness and precision. Now, by weaving ethical and accountable AI into this robust content, we are improving how data is used across the healthcare landscape with powerful new applications in health tech, drug discovery, population health, and payer processes.
